

In The Claims

Please cancel claims 19 and 22.

17. (Once Amended) A light-emitting device comprising an inorganic layer including an emission region and provided between an anode and a cathode wherein said anode has a visible light transmittance of 35 to 75%, wherein said anode comprises a metal selected from the group consisting of Ni, Ru, Ir, Rh, Pt, Pd, Re, Ti, Zr, Nb, Mo, and W and said anode has a dopant selected from the group consisting of H, Li, Na, K, Rb, Cs, Cu, Ag, and Au.

20. (Once Amended) A light emitting device according to claim 17, wherein said anode comprises a metal compound having said metal and a material selected from the group consisting of oxides, nitrides and oxide-nitrides.

21. (Once Amended) A light emitting device according to claim 17, wherein said anode comprises a plurality of layers, a first set of the layers having a material selected from the group comprising of zinc, indium or tin, a second of the layers having said material.

24. (Once Amended) A light-emitting device comprising a layer including an emission region and provided between an anode and a cathode wherein said anode has a visible light transmittance of 35 to 75%, a metal selected from the group consisting of Ni, Ru, Ir, Rh, Pt, Pd, Re, Ti, Zr, Nb, Mo, and W, and a first layer comprising a first compound selected from the group consisting of zinc, indium, and tin and a second layer comprising said metal, and wherein said second layer has a thickness that is greater than 20 nm and less than or equal to 80 nm, the anode further including dopant selected from the group consisting of H, Li, Na, K, Rb, Cs, Cu, Ag, and Au.
